

Instant Response™

Cloud-hosted managed service for monitoring and threat hunting

Key Benefits

- ✓ Affordable to mid-sized businesses through tiered managed services
- ✓ Monitors and alerts organizations to cyber incidents in minutes
- ✓ Proactive threat hunting assessments from experienced investigators
- ✓ Immediate access to engage in Fast Forensics™ Digital Investigations upon incident discovery

Affordably Detect Your Cyber Threats

In the post-breach world, compromise happens daily. CyFIR exists to discover and react to cyber risks that have bypassed other layers of defense by allowing organizations to see more, know more, and respond instantly. Instant Response™ offers access to CyFIR Enterprise as a tiered managed service, making cybersecurity monitoring and threat hunting accessible to medium-sized businesses and global enterprises. Instant Response protects intellectual property, customers, and stakeholders with unparalleled digital security and forensic investigation capabilities. With CyFIR, detection and mitigation happen up to 31 times faster, reducing the cost of breach by up to 25 percent.

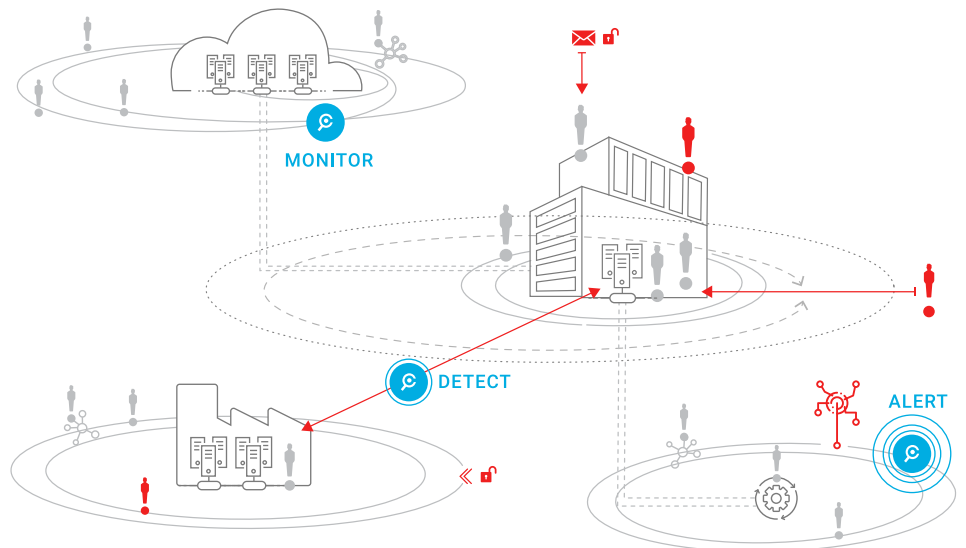

CyFIR solutions address the largest area of financial risk to save 25% in average incident response cost savings.

Instant Response delivers a complete cloud-hosted monitoring solution that detects and alerts investigators to indicators of compromise, such as malicious processes and IP connections. Using the power of the CyFIR Enterprise Platform distributed processing architecture, trained investigators continuously scan an environment for suspicious activity and then go further to provide hands-on analysis of potential threats undetectable by automated tools. Instant Response is available at three levels: Blue, Orange, and Black.

CyFIR Solutions

- CyFIR Enterprise**
Forensics & Incident Response
- CyFIR Fast Forensics™**
Digital Investigations
- CyFIR Instant Response™**
CyFIR Enterprise as a Service

Blue

The introductory Blue level includes licensing and monitoring for up to 500 endpoints, with the ability to scale to meet the needs of the enterprise in detecting and alerting to cyber incidents.

Orange

The Orange level takes monitoring a step further by providing enhanced security services and proactive annual threat hunting conducted by experienced investigators.

Black

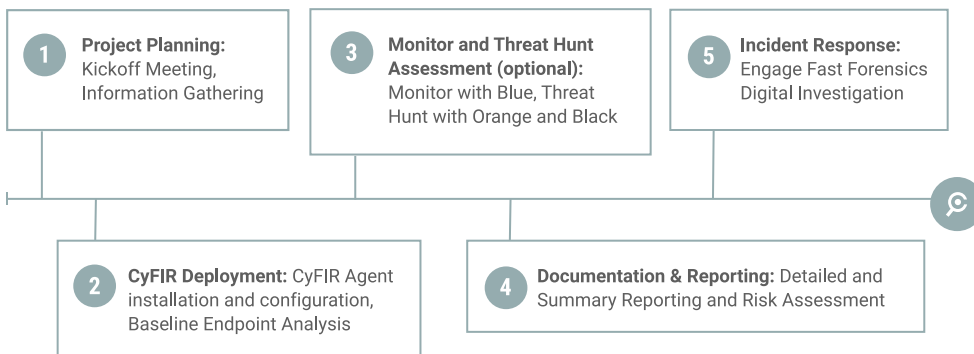

The premiere Black level provides multiple annual proactive threat hunts, as well as an additional deep web security intelligence assessment for an in-depth environmental review. This level of monitoring and active detection identifies threats that have bypassed other security defenses and flown under the radar of automated detection.

Breach Detected, Now What?

Once a cyber incident is detected by Instant Response, an organization can immediately execute a Fast Forensics™ Digital Investigation engagement, which acts as a call to action for CyFIR's experienced investigators. This allows an organization to only pay for what is needed, while keeping experienced investigators at its fingertips. Fast Forensics investigations can instantly investigate security, human resource, and privacy incidents, as well as intellectual property misuse, data exfiltration, and more. By engaging Fast Forensics, investigators can respond before significant data loss can cause irreparable damage to corporate value.

Implementation

CyFIR Fast Forensics™ uses a remote installation and analysis model, facilitating complete access and detailed investigative analyses in a fraction of the time of traditional forensic tools and "boots on the ground" methodologies. Within a matter of days or weeks, CyFIR leads clients through a step-by-step process for identifying and mitigating key cyber risk factors:

"After we added CyFIR to our security stack, we were able to capture and analyze about 80% more data on our endpoints' health and activities than we could using 'our anti-virus solution' alone."

- Major Financial Services Institution, CISO

"Once we demonstrated the capabilities of CyFIR™, our legal department stopped requesting traditional full disk captures. Today, they just ask us to 'CyFIR it.' By eliminating technical and logistical hurdles, CyFIR has been a tremendous help in expediting our cases through increased productivity."

- Global Cloud Provider, Director
