

Fast Forensics™ Digital Investigations

Turnkey Cyber Risk Solutions

Key Benefits

- ✓ Cost-effective access to industry-leading expertise
- ✓ Dramatically reduce the cost of any active or potential threats
- ✓ Profile users and systems to uncover activity missed by automated tools
- ✓ Strengthen security practices by identifying and evaluating multiple risk factors

Reduce Cyber Risk.

In today's digital economy, enterprises rely on thousands of connected devices and computer endpoints to conduct business and store critical information. This extensive digital footprint creates a complex, decentralized, and continuously evolving surface area upon which potential security vulnerabilities can reside. From protecting intellectual property to identifying suspicious activity or malware, enterprises need technology that provides visibility at scale and trained investigators with the experience to root out potential threats.

CyFIR Solutions

CyFIR Enterprise
Forensics & Incident Response

CyFIR Fast Forensics™
Digital Investigations

CyFIR Instant Response™
CyFIR Enterprise as a Service

CyFIR Fast Forensics™ combines its best-in-class platform, talent, and techniques to deliver turnkey investigative services that reduce cyber risk. With the ability to remotely and virtually instantaneously search and evaluate data across an entire environment, CyFIR Fast Forensics™ leverages the power of CyFIR Enterprise to provide a depth of endpoint visibility and speed of analysis unmatched in the digital forensics industry. Experienced CyFIR analysts then go beyond the capabilities of automated tools to provide an "eyes-on" evaluation of data from across an enterprise.

"Once we demonstrated the capabilities of CyFIR™, our legal department stopped requesting traditional full disk captures. Today, they just ask us to 'CyFIR it.' By eliminating technical and logistical hurdles, CyFIR has been a tremendous help in expediting our cases through increased productivity."

- Global Cloud Provider, Director

Fast Forensics™ Digital Investigations

CyFIR Fast Forensics™ analyses are purpose-built digital investigations tailored to address specific corporate objectives or custom needs.

CyFIR Fast Forensics™ for IP Protection

Protect corporate value through targeted monitoring of critical files and user activity, tracking and attributing exfiltration of sensitive data, ensuring the legitimacy of IP transfers, etc.

CyFIR Fast Forensics™ for Incident Investigation

Perform rapid investigation of potential incidents, computer misuse, or data breaches utilizing CyFIR's concurrent processing architecture and global reach.

CyFIR Fast Forensics™ for Foreign Assets

Understand and evaluate risks to an enterprise by analyzing systems across the globe in real time.

CyFIR Fast Forensics™ for Mergers & Acquisitions

Reduce buyer and seller risks by monitoring user activity, identifying security threats or undiscovered malware, and evaluating an acquisition target's security posture before integration.

CyFIR Fast Forensics™ for Internal Investigations

Conduct discreet investigations with stealth installations on endpoints to collect forensic data without potential productivity losses or tipping your hand to investigation targets.

CyFIR Fast Forensics™ for Threat Hunting

Evaluate critical business assets and security defenses to identify legacy, active, or potential security compromises before an incident occurs.

CyFIR Fast Forensics™ for Custom Engagements

Tailored support for organizations with unique needs or multiple business objectives.

Implementation

CyFIR Fast Forensics™ uses a remote installation and analysis model, facilitating complete access and detailed investigative analyses in a fraction of the time of traditional forensic tools and "boots on the ground" methodologies. Within a matter of days or weeks, CyFIR leads clients through a step-by-step process for identifying and mitigating key cyber risk factors:

"After we added CyFIR to our security stack, we were able to capture and analyze about 80% more data on our endpoints' health and activities than we could using 'our anti-virus solution' alone."

- Major Financial Services Institution, CISO
